

Job Title: Electronic Products Technician

Demand for FarSite's netBin IoT product range is rapidly growing and to meet that need we require an Electronic Products Technician to work in our Basingstoke premises.

Job Description:

The job will encompass a wide variety of different activities to support supply of the company's wide communications product range, this will include:

- Assembly, Test, Repairs and Modifications of products in accordance with build/test instructions.
- Electronic/electro-mechanical assembly.
- Preparation of products for customer shipment.
- Undertake test activities on customer returns and assist in the analysis of causes of failure.
- There will also be some scope for assisting product development group with new product testing.

The job will be mainly working in the production area, there will also be some desk based work.

You will be given training, there will be opportunities to expand your skills and grow your role within FarSite as it expands.

Hours:

9:00 to 17:30 Monday to Friday, 1 hour for lunch. There is some flexibility on working hours.

Candidate requirements:

- At least 1 year of experience working with electronic devices in a production environment or similar.
- Experience of testing products.
- Very good attention to detail and ability to work to a consistently high standard.
- Ability to work unsupervised.
- Able to use a windows PC and applications including Word and Excel.
- Full car driving licence.
- Qualifications - English, Maths, Science/Engineering.

Would suit:

Someone who has experience working at a Contract Electronics Manufacturer or similar.

Salary:

Commensurate with the role and the candidate's level of previous experience.

Background:
